UTILITY THIRD-PARTY SAFETY INSPECTIONS

Harbor has partnered with numerous electrical Utility Suppliers and Utility Contractors over the past four (4) years providing independent 3rd party safety auditing services. Harbor was tasked with providing an objective independent safety review of how utility field personnel and entire electrical crews perform work. Our professional utility safety specialist provided these reviews in the field with the utility professionals, observing behaviors, work practices as well as providing coaching and feedback. As part of this service, Harbor developed and maintained a reporting system that included utilizing wireless tablet technology for efficient and accurate reporting. This results in extremely quick compilation of results enabling supervisors and managers to adjust quickly and effectively. Highlights of our projects regarding Utility Safety includes:

- ⇒ In the field observations on transmission, distribution, and substation crews. Harbor has also conducted driving safety inspections to observe safe driving practices.
- ⇒ Reports to client within 24 hours.
- ⇒ Weekly reporting of data that was provide to client to summarize areas of concerns.
- ⇒ Monthly and Annual reports provided to client with results customized to the client (by State, Region, Business Unit, etc.).
- ⇒ Results of reviews were utilized to determine areas to focus on for additional training and or changes to existing safety programs. Clients utilized this data for measuring their safety performance goals.
- ⇒ Coaching and mentoring in the field, resulting in changes in behaviors and actions that can reduce serious injury and/or even prevent fatalities.
