

## Mechanical/Electrical/ Plumbing (MEP)

Harbor's mechanical and electrical engineering, HVAC, and plumbing design services team members are focused on reliable systems and conscious of the need to balance functionality, cost, energy conservation and integration with aesthetic architectural elements. We meet the challenges of achieving occupant comfort, meeting code-mandated operating parameters, and concealing large equipment both visually and audibly.

- Electrical System Design
- Electrical Preventative Maintenance Program Development
- Arc Flash Hazard Analysis
- HVAC System Design
- Industrial and Commercial Process Design and Analysis
- Hydraulic Analysis and Design
- Layout and Design of Plumbing Systems
- Industrial Water Balance Analysis
