

Water

Harbor's expert team of water professionals have successfully completed projects of various sizes and levels of complexity for municipalities, private and public utilities, and private developments. Our engineers apply their technical expertise and thorough knowledge of funding resources and infrastructure construction to ensure an uncompromised level of quality and value for our clients. Engineers in this group are supported by our staff of structural engineers, site designers, and environmental scientists to achieve the firm's overall goal of respect for the environment, our clients, and the communities we serve.
